

Rainbow Bush

Portulacaria afra f. variegata

- I am a slow-growing succulent shrub with many small, round variegated leaves, which are a pretty pale green, white, and pink in color. My stems propagate easily as cuttings.
- I crave bright, indirect sunlight, as prolonged direct sunlight can burn my leaves.
- In winter, I don't need much water. In warmer months, water me thoroughly every two weeks and make sure my pot has drainage holes.
